EDUCATION

California State Polytechnic University, Pomona

August 2022 – May 2026

Bachelor of Science in Computer Science, Minor in Data Science - GPA: 3.85

- **Relevant Coursework:** Data Structures and Algorithms, Object-Oriented Design, Database Systems, Systems Programming, Software Engineering, Machine Learning, Generative AI, Big Data.
- **Honors & Awards:** President's Honor List 22-25, UCRHacks, UCSDHacks, CSUFHacks, CPPHacks, HackTech

EXPERIENCE

Software Engineer Intern | CoStar Group

June 2026 – August 2026

- Drove feature parity for the replatform of ForRent.com to a server-rendered ASP.NET Core MVC + Vue/TypeScript stack, shipping 41 merged production PRs across controllers, Razor views, and client apps.
- Replaced days of manual QA with an automated site-migration audit in Node.js + Playwright, built as a Claude skill that diffs 11,000+ URLs per run at 92% accuracy, filing 29 confirmed production bugs.
- Shipped an interactive map overlay of nearby restaurants, groceries, and coffee shops by building a backend-for-frontend endpoint that fans out parallel requests to an internal geo service.
- Fixed tablets silently receiving the desktop experience on the highest-traffic listing page by extending the server-side device pipeline to a three-way architecture with per-device views and cached bundle selection.

ML Research Assistant | Cal Poly Pomona

September 2025 – May 2026

- Processed multi-source geospatial data in ArcGIS Pro with raster calculator and clipping for NDVI prediction.
- Developed and compared multiple machine learning models, engineering features from Sentinel-2 multi-spectral bands to raise the R^2 score from 0.05 to 0.5 and decrease RMSE to 0.08.

Software Engineer Intern | FOX

September 2025 – November 2025

- Standardized 182 sports API endpoints into one interface for LLM projects by wrapping FastAPI applications as HTTP-based MCP servers, containerized with Docker and deployed on AWS ECS.
- Reduced data-ingestion latency 40% by building a Python and Boto3 tool that compared S3 object creation timestamps across 11,852 files in AWS Kinesis pipelines.

Software Engineer Intern | Newegg

June 2025 – August 2025

- Raised tariff-code classification accuracy 23% with a Python retrieval-augmented generation (RAG) pipeline, indexing HTSUS data in a ChromaDB vector store with OpenAI-based contextual analysis.
- Deployed an AI workflow turning 500+ server quotes into structured pricing data, cutting manual work 85%.

PROJECTS

Live Aid | Caltech Hackathon Wolfram Alpha & Vly.ai Award

devpost.com/software/live-aid

- Developed a financial impact dashboard for global displacement crises using Next.js, Tailwind, and Convex, delivering interactive maps, real-time data visualizations, and donor management scalable to 1000+ users.
- Trained a neural network to predict an urgency score from country conflict data, providing contextual input to OpenAI-based aid allocation recommendations.

Lawgiq | Law Di Gras Applied AI Hackathon 3rd Place

github.com/aaronchiuwei/lawgiq

- Built an AI case dashboard for a personal-injury law firm in Next.js, TypeScript, and SQLite, turning Clio Manage case files into role-scoped views for attorneys, treating medical providers, and clients.
- Engineered a read-only Python pipeline that pulls every case document from the Clio API and extracts per-page text with PyMuPDF, falling back to 300 DPI Tesseract OCR on scanned pages.
- Ranked what needs an attorney's attention first by scoring every note, email, task, and document on category, impact, and urgency with TypeSafe AI's Jev model.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C/C++, C#, SQL, HTML/CSS

Frameworks: React, React Native, Next.js, Node.js, Vue, ASP.NET Core, Flask, FastAPI, Tailwind

AI & Data: PyTorch, OpenAI API, retrieval-augmented generation (RAG), ChromaDB, Pandas, NumPy, ArcGIS Pro

Infrastructure: AWS (ECS, S3, Kinesis), Docker, PostgreSQL, MongoDB, Git, Linux, Playwright
